Copy of Claim 5.8 on record of 10/6/03. Kelly et al. Serial No. 09/759,920 Page six

54. (Withdrawn)

Amendment

- 55. (Withdrawn)
- 56. (Withdrawn)
- 57. (Withdrawn)
- 58. (Amended) The process of filtering a fluid containing positively charged particles and negatively charged particles to remove said positively charged particles and said negatively charged particles from said fluid which comprises:

filtering said fluid with one or more filters having a nominal pore diameter between 0.1 and 10 microns and each having a Zeta Potential between about 0 and -5 millivolts in the fluid.

- 59. (Previously Added) The process of Claim 58 wherein the fluid is an aqueous fluid and the surface is substantially neutral over a preselected pH range.
- 60. (Previously Added) The process of Claim 58 wherein the one or more filters have a log reduction value (LRV) of at least 3 of particles in the selected fluid.
- 61. (Previously Added) The process of Claim 58 wherein the one or more filters have a log reduction value (LRV) of from about 3 to about 20 of particles in the selected fluid.
